

How to Enable TLS Security in Internet Explorer

- 1) Click 'Tools' in Internet Explorer Menu Bar. If you can't see 'Tools', scroll to the bottom of this document to see how to enable the menu bar.

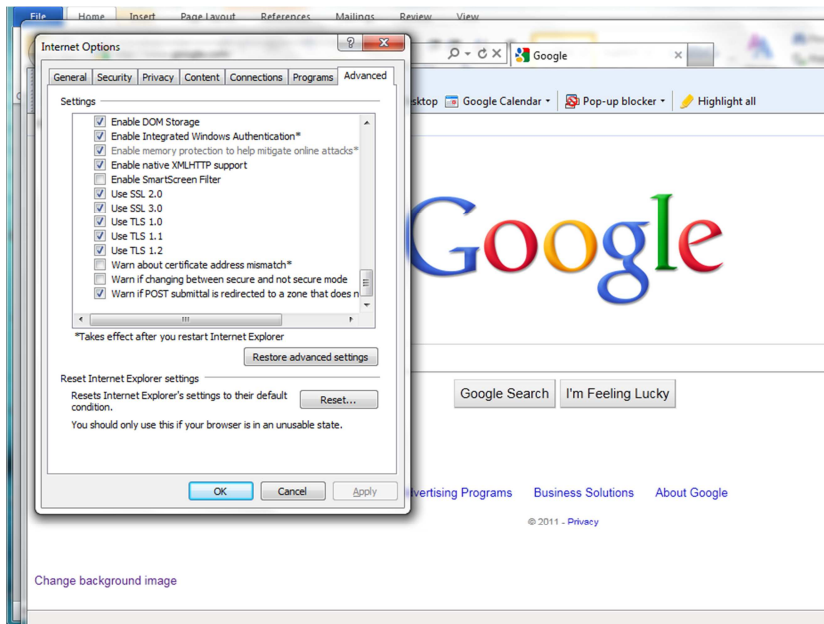

- 2) Click 'Internet Options'

How to Enable TLS Security in Internet Explorer

- 3) Click the 'Advanced' Tab, scroll to the bottom of the options list, and check 'Use TLS 1.0, then click 'OK'. You will now be able to access the IntelliPhone Control Panel.

If you are unable to see the 'Tools' menu, right-click on the top bar of Internet Explorer. The RED arrow points to location where you should right-click. Click on 'Menu bar' to activate it.
